City Commission  
and Retirement Board  
City of Fort Pierce Retirement and Benefit System  
Fort Pierce, Florida

Dear City Commission and Retirement Board:

The results of the September 30, 2021 Annual Actuarial Valuation of the City of Fort Pierce Retirement and Benefit System are presented in this report.

This report was prepared at the request of the Board and is intended for use by the Retirement System and those designated or approved by the Board. This report may be provided to parties other than the Fund only in its entirety and only with the permission of the Board. GRS is not responsible for unauthorized use of this report.

The purposes of the valuation are to measure the Fund's funding progress and to determine the employer contribution rate for the 2022-2023 fiscal years. Information required by Statement Nos. 67 and 68 of the Governmental Accounting Standards Board (GASB) are provided in separate reports. This report should not be relied on for any purpose other than the purposes described herein. Determinations of financial results, associated with the benefits described in this report, for purposes other than those identified above may be significantly different.

The contribution amount in this report is determined using the actuarial assumptions and methods disclosed in Section D of this report. This report includes risk metrics on page A-9 but does not include a more robust assessment of the risks of future experience not meeting the actuarial assumptions. Additional assessment of risks was outside the scope of this assignment.

This valuation assumed the continuing ability of the plan sponsor to make the contributions necessary to fund this plan. A determination regarding whether or not the plan sponsor is actually able to do so is outside our scope of expertise and was not performed.

The findings in this report are based on data and other information through September 30, 2021. The valuation was based upon information furnished by the City, concerning Retirement System benefits, financial transactions, plan provisions and active members, terminated members, retirees and beneficiaries. We checked for internal reasonability and year-to-year consistency, but did not audit the data. We are not responsible for the accuracy or completeness of the information provided by the City.

This report was prepared using assumptions adopted by the Board. All actuarial assumptions used in this report are reasonable for the purposes of this valuation. Additional information about the actuarial assumptions is included in Section D of this report.

This report was prepared using our proprietary valuation model and related software which, in our professional judgment, has the capability to provide results that are consistent with the purposes of the valuation and has no material limitations or known weaknesses. We performed tests to ensure that the model reasonably represents that which is intended to be modeled.

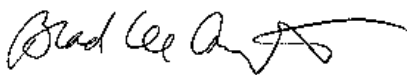

This report has been prepared by actuaries who have substantial experience valuing public employee retirement systems. To the best of our knowledge the information contained in this report is accurate and fairly presents the actuarial position of the City of Fort Pierce Retirement and Benefit System as of the valuation date. All calculations have been made in conformity with generally accepted actuarial principles and practices and with the Actuarial Standards of Practice issued by the Actuarial Standards Board.

Brad Lee Armstrong and Jeffrey T. Tebeau are Members of the American Academy of Actuaries (MAAA). These actuaries meet the Academy's Qualification Standards to render the actuarial opinions contained herein. Our statement by the Enrolled Actuary is contained in Section A.

The signing actuaries are independent of the plan sponsor.

Gabriel, Roeder, Smith & Company will be pleased to review this valuation and report with the Board of Trustees and to answer any questions pertaining to the valuation.

Respectfully submitted,  
Gabriel, Roeder, Smith & Company

Brad Lee Armstrong, ASA, EA, FCA, MAAA

Jeffrey T. Tebeau, FSA, EA, FCA, MAAA

### **SUMMARY OF VALUATION RESULTS AND CERTIFICATION**

# Summary of Valuation Results

## September 30, 2021

### Funding Objective

The basic funding objective of the Retirement and Benefit System is to avoid transfer of the cost of benefit obligations between generations of taxpayers. This objective is implemented by contributions sufficient to:

- Pay for costs allocated to the current year on account of service rendered by participants in the current year (Normal Cost).
- Pay for costs allocated to prior years on account of service rendered by participants in prior years (Unfunded Actuarial Accrued Liability) over a maximum 30-year period.

The annual actuarial valuation measures the relationship between Retirement and Benefit System obligations and assets and determines the contribution rates for the ensuing year. When appropriate, amortization bases were combined in order to moderate scheduled contribution rate volatility.

### Funding Progress Indicators

The September 30, 2021 actuarial valuation indicates that the actuarial accrued liabilities of the Retirement and Benefit System are 90% funded by valuation assets. This is the same as last year's funded ratio of 90%, but this is after adopting assumption changes. Although not historically referred to, the ratio of the market value of assets to the Actuarial Accrued Liabilities is 96% which is an increase from last year's market value funded ratio of 90%.

### Trends to Monitor

The funding value of assets currently trails the market value of assets by approximately \$17.2 million. Absent investment returns below the 7.25% assumed or losses from other sources, this will create a downward pressure on contribution requirements and a coinciding upward pressure on the funded ratios in the next three valuation reports. Please also refer to pages A-7, A-8 and B-4.

# Summary of Valuation Results

## September 30, 2021

### Assumption Changes

Both forward-looking asset return and inflation expectations have declined significantly in the past few years. The probability of exceeding an 7.50% rate of return is less than 35% over a 10-year period based on our 2021 version of the GRS Capital Market Assumptions Modeler. Therefore, we have lowered the assumed rate of return to 7.25%. If the economic (capital market) assumption expectations continue to decline, we may have to decrease the assumption as soon as the next valuation.

The impact of the assumption change increased the actuarial accrued liability by \$6.5 million and increased the estimated employer contributions by \$640 thousand.

### Benefit Changes

The September 30, 2021 valuation reflects changes in relation to City Ordinance No. 21-067. This ordinance removes the \$100,000 dollar maximum pension payment for members hired before October 1, 2012. The impact of the benefit change increased the actuarial accrued liability by \$2.4 million and increased the estimated employer contributions by \$221 thousand.

# Summary of Valuation Results

## September 30, 2021

### Observed Experience

While the investment return on market value was 18.87%, the recognized rate of investment return was 10.15% due to averaging investment experience over the last four years. The recognized investment return was greater than the 7.50% assumed return for fiscal year 2021. This was favorable and contributed to the aggregate experience gain. Note that each year's investment experience gain (loss) is spread over four years in equal dollar installments to reduce the effect of market volatility on contribution rates.

Demographic experience varied among the divisions. The principal deviations from projected demographic experience were:

- 5.0% average pay increases across all the divisions vs. 5.1% expected (favorable)
- Less than expected retiree mortality experience (unfavorable); and
- 10-year average payroll growths were less than the 4.0% assumed (unfavorable for unfunded liability contribution rates)

The net effect of the preceding experience factors was an aggregate experience gain of \$5,088,261.

Year-to-year experience variations are expected and normal in the operation of a retirement system as members vary their activities and economic conditions change. The expectation is that the favorable years and unfavorable years will tend to cancel over 5 to 10-year periods.

Derivation of the current year's gain is located on Page B-3.

# Summary of Valuation Results

## September 30, 2021

### Valuation Results - Contribution Requirement

The percent-of-payroll contribution requirements for the 2022-2023 fiscal year are:

	General	Utilities Authority	Police
Members			
-Bargaining	5.16 %	6.16 %	5.16 %
-Non-Bargaining	5.16	6.16	5.16
Employer for			
-Bargaining	17.13 %	17.96 %	14.62 %
-Non-Bargaining	17.13	17.96	14.62
-Illustrative	\$1,944,771	\$2,912,510	\$1,077,518

For comparison, the percent-of-payroll contribution requirements for the 2021-2022 fiscal year are shown below, and are based on proposal 1 of the actuarial cost estimate dated August 13, 2021, which removed the \$100,000 dollar maximum for annual pension benefits for members hired before October 1, 2012.

	General	Utilities Authority	Police
Members			
-Bargaining	5.16 %	6.16 %	5.16 %
-Non-Bargaining	5.16	6.16	5.16
Employer for			
-Bargaining	17.14 %	16.92 %	13.39 %
-Non-Bargaining	17.14	16.92	13.39
-Illustrative	\$1,893,876	\$2,807,642	\$1,014,745

Comparative contribution information is shown on page B-2. Composition of the current contribution rates is shown on page B-1.

# Summary of Valuation Results

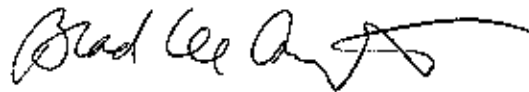

## September 30, 2021

### Cost-of-Living Adjustment (COLA)

Section 13 - 43 of the City's Code of Ordinances provides for a COLA if the investment return of the fund exceeds that required to satisfy the actuarial interest assumption, which did happen this year. In addition, the cumulative value of any COLA's granted since 1999 may not exceed the cumulative net actuarial gains since 1999. Page B-11 shows the cumulative value of COLA's and net actuarial gains/(losses) since 1999. The present balance is \$(38,220,363). So even though the recognized rate of investment return for the last fiscal year of 10.15% exceeded the actuarial interest assumption of 7.50%, no COLA could be provided under Section 13 - 43 until the Retirement and Benefit System's future actuarial gains exceed \$38,220,363 plus interest. Given the cumulative net actuarial loss balance, this COLA provision is not likely to operate for the indefinite future.

### Certification

This actuarial valuation was prepared and completed by me or under my direct supervision, and I acknowledge responsibility for the results. To the best of my knowledge, the results are complete and accurate, and in my opinion, the techniques and assumptions used are reasonable and meet the requirements and intent of Part VII, Chapter 112, Florida Statutes. There is no benefit or expense to be provided by the plan and/or paid from the plan's assets for which liabilities or current costs have not been established or otherwise taken into account in the valuation report. All known events or trends which may require a material increase in plan costs or required contribution rates have been taken into account in the valuation report.

Brad Lee Armstrong, ASA, EA, FCA, MAAA [20-5614]

2/7/2022

Date

## Other Observations

### General Implications of Contribution Allocation Procedure or Funding Policy on Future Expected Contributions and Funded Status

Given the System's contribution allocation procedure, if all actuarial assumptions are met (including the assumption of the Retirement and Benefit System earning 7.25% on the Market Value of Assets), it is expected that:

1. The employer normal cost is sufficient to cover the cost of benefits accruing each year;
2. The Unfunded Actuarial Accrued Liabilities (UAAL) will continue to be amortized according to the schedules on pages B-7 through B-9, but may not be completely paid off in the definite future; and
3. The funded status of the Retirement and Benefit System will continue to increase gradually towards a 100% funded ratio.

The computed contribution shown on page B-1 may be considered as a minimum contribution rate that complies with the Board's funding policy. The timely receipt of the actuarially determined contributions is critical to support the financial health of the plan. Users of this report should be aware that contributions made at the actuarially determined rate do not necessarily guarantee benefit security.

### Limitations of Funded Status Measurements

Unless otherwise indicated, a funded status measurement presented in this report is based upon the Actuarial Accrued Liability (AAL) and the Funding Value of Assets (FVA). Unless otherwise indicated, with regard to any funded status measurements presented in this report:

1. The measurement is inappropriate for assessing the sufficiency of Retirement System assets to cover the estimated cost of settling the Retirement and Benefit System's benefit obligations; for example, transferring the liability to an unrelated third party in a market value type transaction.
2. The measurement is dependent upon the Actuarial Cost Method which, in combination with the Retirement System's amortization policy, affects the timing and amounts of future contributions. The amounts of future contributions will most certainly differ from those assumed in this report due to future actual experience differing from assumed experience based upon the actuarial assumptions. A funded status measurement in this report of 100% is not synonymous with no required future contributions. Even if the funded status is over 100%, the Retirement and Benefit System would still require future normal cost contributions (i.e., contributions to cover the cost of active membership accruing an additional year of service credit).
3. The measurement would produce a different result if the Market Value of Assets (MVA) were used instead of the FVA, unless the MVA is used in the measurement.

## Other Observations

### Limitations of Project Scope

Actuarial standards do not require the actuary to evaluate the ability of the plan sponsor or other contributing entities to make required contributions to the plan when due. Such an evaluation was not within the scope of this project and is not within the actuary's domain of expertise. Consequently, the actuary performed no such evaluation.

### Risks to Future Employer Contribution Requirements

There are ongoing risks to future employer contribution requirements to which the Retirement and Benefit System is exposed, such as:

- Actual and Assumed Investment Rate of Return
- Actual and Assumed Mortality Rates
- Amortization Policy

In particular, the assumed investment rate of return, while reasonable, may produce annual losses over 50% of the time, even if average returns over a multi-year period meet the assumed rate. We believe the investment return assumption should be monitored and reviewed on an annual basis.

## Risk Measures - Risks Associated with Measuring the Accrued Liability and Actuarially Determined Contribution

The determination of the accrued liability and the actuarially determined contribution requires the use of assumptions regarding future economic and demographic experience. Risk measures, as illustrated in this report, are intended to aid in the understanding of the effects of future experience differing from the assumptions used in the course of the actuarial valuation. Risk measures may also help with illustrating the potential volatility in the accrued liability and the actuarially determined contribution that result from the differences between actual experience and the actuarial assumptions.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions due to changing conditions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period, or additional cost or contribution requirements based on the System's funded status); and changes in plan provisions or applicable law. The scope of an actuarial valuation does not include an analysis of the potential range of such future measurements.

Examples of risk that may reasonably be anticipated to significantly affect the plan's future financial condition include:

1. **Investment risk** – actual investment returns may differ from the expected returns;
2. **Asset/Liability mismatch** – changes in asset values may not match changes in liabilities, thereby altering the gap between the accrued liability and assets and consequently altering the funded status and contribution requirements;
3. **Contribution risk** – actual contributions may differ from expected future contributions. For example, actual contributions may not be made in accordance with the plan's funding policy or material changes may occur in the anticipated number of covered employees, covered payroll, or other relevant contribution base. The continuing ability of the plan sponsor to make the contributions necessary to fund the plan is outside our scope of expertise and was not performed by GRS;
4. **Salary and Payroll risk** – actual salaries and total payroll may differ from expected, resulting in actual future accrued liability and contributions differing from expected;
5. **Longevity risk** – members may live longer or shorter than expected and receive pensions for a period of time other than assumed; and
6. **Other demographic risks** – members may terminate, retire or become disabled at times or with benefits other than assumed resulting in actual future accrued liability and contributions differing from expected.

The effects of certain trends in experience can generally be anticipated. For example, if the investment return since the most recent actuarial valuation is less (or more) than the assumed rate, the cost of the plan can be expected to increase (or decrease). Likewise, if longevity is improving (or worsening), increases (or decreases) in cost can be anticipated.

\* Revised actuarial assumptions.

(5). The funded ratio is the most widely known measure of a plan's financial strength, but the trend in the funded ratio is much more important than the absolute ratio. The funded ratio should trend to 100%. As it approaches 100%, it is important to re-evaluate the level of investment risk in the portfolio and potentially to re-evaluate the assumed rate of return.

(6) and (7). The ratio of retiree liabilities to total accrued liabilities gives an indication of the maturity of the system. As the ratio increases, cash flow needs increase, and the liquidity needs of the portfolio change. A ratio on the order of 50% indicates a maturing system.

(8) and (9). The ratio of liabilities and assets to payroll gives an indication of both maturity and volatility. Many systems have ratios between 500% and 700%. Ratios significantly above that range may indicate difficulty in supporting the benefit level as a level % of payroll.

(10) The ratio of unfunded liability to payroll gives an indication of the plan sponsor's ability to actually pay off the unfunded liability. A ratio above approximately 300% or 400% may indicate difficulty in discharging the unfunded liability within a reasonable time frame.

(11) and (12). A positive net cash flow means contributions exceed benefits and expenses. A negative cash flow means benefits and expenses exceed contributions, and existing funds may be used to make payments. A certain amount of negative net cash flow is generally expected to occur when benefits are prefunded through a qualified trust. Large negative net cash flows as a percent of assets may indicate a super-mature plan or a need for additional contributions.

(13) and (14). Investment return is probably the largest single risk that most systems face. The year-by-year return and the five-year geometric average both give an indication of the reasonableness of the system's assumed return. Of course, past performance is not a guarantee of future results. Market rate shown is based on an actuarial estimation method and will differ modestly from figures reported by the investment consultant.

### **VALUATION RESULTS**

**Contributions to Finance Benefits of the  
Retirement and Benefit System  
for the Plan Year Beginning October 1, 2022  
to be Contributed during the Fiscal Year  
Beginning October 1, 2022**

Contributions for	Contributions Expressed as Percents of Active Member Payroll		
	General Members	Utilities Authority	Police Members
Normal Cost			
Service pensions	12.85 %	11.38 %	13.29 %
Disability pensions	0.47	0.47	1.01
Death-in-service pensions	0.36	0.41	0.27
Deferred service pensions	2.81	2.85	2.32
Refunds of member contributions	0.63	0.74	0.39
Total Normal Cost	17.12	15.85	17.28
Unfunded Actuarial Accrued Liability <sup>(1)</sup>			
Retired members and beneficiaries	0.00	0.00	0.00
Active and vested terminated members	3.87	6.82	1.77
Total Unf'd. Actuarial Accrued Liability	3.87	6.82	1.77
Administrative Expenses	0.72	0.72	0.72
Total Unadjusted Computed Contribution	21.71	23.39	19.77
Adjustments to Computed Contribution			
FS 112.64 (5) Compliance	0.58	0.73	0.01
Full funding credit <sup>(2)</sup>	0.00	0.00	0.00
Total Adjustments	0.58	0.73	0.01
Total Adjusted Contribution Requirement <sup>(3)</sup>	22.29	24.12	19.78
Member portion	5.16	6.16	5.16
Employer portion	17.13	17.96	14.62

(1) Financing period schedules begin on page B-7.

(2) This is a temporary credit toward the contribution requirement.

(3) FS 112.64 (2) states that "the total contributions to the retirement system or plan shall be sufficient to meet the normal cost of the retirement system or plan and to amortize the unfunded liability." Therefore, the Total Adjusted Contribution for the System shall be no less than Total Normal Cost for the System including the Administrative Expense Load.

FS 112.64 requires employer contributions to be deposited not less frequently than quarterly. Member contributions, which are in addition to the Employer contributions, must be deposited immediately after each pay period.

\* Prior to 9/30/96 the minimum employer contribution required in accordance with Sec. 21.3 of the Retirement and Benefit System Ordinance was 7.60% for General and Utilities Authority, 9.61% for Police.

@ Actual Employer contributions are determined by applying the Employer's contribution rate to the emerging payroll. Projected funding requirement is derived from the City portion of the contribution rates on page B-1. The payroll was increased by a factor of 1.0816 (1.04<sup>2</sup>) to reflect projected payroll growth to the beginning of the fiscal year during which the contribution will be made. Prior to the valuation date of 9/30/05, dollar contributions included Fire members.

(b) After changes in benefit provisions and/or actuarial assumptions and cost methods.

(c) Reflects contribution rates in accordance with an actuarial impact statement performed after the regular valuation.

# Prior to the 9/98 actuarial valuation, reimbursement of investment expenses (approx. 2% of payroll) were included in the contribution requirement. The plan was amended 4/98 to allow payment of investment expenses out of investment income.

\* UAAL represents Unfunded Actuarial Accrued Liability.

## Development of Funding Value of Retirement System Assets

Year Ended September 30:	2018	2019	2020	2021	2022	2023	2024
A. Funding Value Beginning of Year	\$192,299,566	\$200,086,678	\$208,092,074	\$216,567,027			
B. Market Value End of Year	206,965,262	204,393,903	215,450,747	246,661,634			
C. Market Value Beginning of Year	194,774,112	206,965,262	204,393,903	215,450,747			
D. Non-Investment Net Cash Flow	(7,434,910)	(7,851,765)	(8,208,240)	(8,624,145)			
E. Investment Income							
E1. Market Total: B - C - D	19,626,060	5,280,406	19,265,084	39,835,032			
E2. Amount for Immediate Recognition	14,615,114	15,202,462	15,809,066	15,919,122			
E3. Amount for Phased-In Recognition: E1 - E2	5,010,946	(9,922,056)	3,456,018	23,915,910			
F. Phased-In Recognition of Investment Income							
F1. Current Year: 0.25 x E3	1,252,737	(2,480,514)	864,005	5,978,978			
F2. First Prior Year	1,237,898	1,252,737	(2,480,514)	864,005	\$ 5,978,978		
F3. Second Prior Year	644,577	1,237,898	1,252,737	(2,480,514)	864,005	\$ 5,978,978	
F4. Third Prior Year	<u>(2,528,304)</u>	<u>644,578</u>	<u>1,237,899</u>	<u>1,252,735</u>	<u>(2,480,514)</u>	<u>864,003</u>	<u>\$ 5,978,976</u>
F5. Total Recognized Investment Gain	606,908	654,699	874,127	5,615,204	4,362,469	6,842,981	5,978,976
G. Funding Value End of Year: A + D + E2 + F5	200,086,678	208,092,074	216,567,027	229,477,208			
H. Difference between Market & Funding Value	6,878,584	(3,698,171)	(1,116,280)	17,184,426			
I. Recognized Rate of Return	8.07%	8.08%	8.18%	10.15%			
J. Market Value Return	10.27%	2.60%	9.62%	18.87%			

The Funding Value of Assets recognizes assumed investment income (Line E2) fully each year. Differences between actual and assumed investment income (Line E3) are phased-in over a closed 4-year period. During periods when investment performance exceeds the assumed rate, the Funding Value of Assets will tend to be less than Market Value. During periods when investment performance is less than the assumed rate, the Funding Value of Assets will tend to be greater than Market Value. If assumed rates are exactly realized for three consecutive years, it will become equal to Market Value.

## SECTION C

---

### **SUMMARY OF BENEFIT PROVISIONS AND VALUATION DATA SUBMITTED BY THE RETIREMENT AND BENEFIT SYSTEM**

# Summary of Benefit Provisions (September 30, 2021)

**Participation:** Participation in the Retirement and Benefit System begins upon employment.

**Normal Retirement** (no reduction factor for age):

**Eligibility** - Original members: 20 or more years of service.

**All members** - General, Utilities Authority: 25 or more years of service regardless of age, or age 60 with 5 or more years of service.

- Police: 25 or more years of service, regardless of age, or age 55 with 5 or more years of service.

**Mandatory Retirement Age** - None.

**Annual Amount** - All members: Total service times 3.0% of final average salary.

*For members hired prior to October 1, 2012:*

- The maximum annual pension benefit shall not exceed 100% of final average salary.

*For members hired on or after October 1, 2012:*

- The maximum annual pension benefit shall not exceed 75% of final average salary.
- The maximum pension benefit is \$100,000 annually.

The normal form of benefit is a benefit payable for life. Optional forms are available on an actuarial equivalent basis.

**Type of Final Average Salary** - General: Highest 5 consecutive years out of last 10. Police, Utilities Authority: Highest 5 years out of last 10. Overtime hours included in compensation are limited to 300 hours per fiscal year.

*For members hired prior to October 1, 2012:* Payments for unused sick and vacation time included in compensation are limited to unused sick and vacation time accrued through September 20, 2012 for General and Police, and July 1, 2011 for Utilities Authority.

*For members hired on or after October 1, 2012:* Payments for unused sick and vacation time are not included in compensation.

**Deferred Retirement Option Plan (DROP) Retirement:**

**Eligibility** - General, Police, and Utilities Authority members: Same as Normal Retirement, election may be made on or after normal retirement eligibility, but not after reaching 30 years of service. Participation in the DROP ends after five years.

**Annual Amount** - Computed as a normal retirement but based upon service and final average salary at time of DROP election. Member contributions cease and monthly benefits (and post-retirement increases, if any) accumulate in a self-directed DROP account and are payable to the member upon termination of employment.

**Deferred Retirement (vested benefit):**

**Eligibility** - 5 or more years of service. Benefit begins upon attaining age 60.

**Annual Amount** - Computed as a normal retirement but based upon service and final average salary at time of termination.

**Duty Disability Retirement:**

**Eligibility** - No age or service requirements if the Retirement Board finds the member to be in receipt of weekly workers' compensation on account of disability in the course of duty.

**Annual Amount** - Computed as a normal retirement based upon service projected to the end of the duty disability period and final average salary at time of disability. Minimum benefit is 75% of final average salary during the duty disability period. The duty disability period ends on the earlier of the 25th anniversary of the member's hire date or the date the member attains age 65 but not prior to 5 years from the date of duty disability retirement.

**Non-Duty Disability Retirement:**

**Eligibility** - 5 or more years of service.

**Annual Amount** - Computed as a normal retirement but based upon service and final average salary at time of disability.

**Duty Death Before Retirement:**

**Eligibility** - No age or service requirements. Benefits begin upon termination of workers' compensation.

**Annual Amount** - A benefit equal to the same amount that was paid by workers' compensation to the spouse until death, to unmarried children under 18 and dependent parents.

**Non-Duty Death Before Retirement:**

**Eligibility** - 5 or more years of service.

**Annual Amount** - Computed as a normal retirement but actuarially reduced in accordance with a 100% joint and survivor election.

**Post-Retirement Increases:** COLA may be granted from investment returns in excess of actuarial interest assumption, not to exceed 3%.

**Military Service:** May be purchased by members who meet the eligibility conditions.

**Member Contributions:**

- General: 5.16% of annual salary
- Police: 5.16% of annual salary
- Utilities Authority: 6.16% of annual salary

**Employer Contributions:** Actuarially determined amounts which together with member contributions are sufficient to at least cover the requirements of the funding objective stated on page A-1.

**Changes in Plan Provisions:** City Ordinance No. 21-067 removes the \$100,000 dollar maximum pension payment for members hired before October 1, 2012.

## **SECTION D**

---

### **ACTUARIAL COST METHOD, ACTUARIAL ESTIMATES AND DEFINITIONS OF TECHNICAL TERMS**

## Actuarial Cost Method Used for the Valuation

The actuarial cost method is a procedure for allocating the actuarial present value of future benefits and expenses to time periods. The method used for this valuation is the individual entry-age actuarial cost method, and has the following characteristics:

**Actuarial Present Value of Future Benefits.** Actuarial present values are calculated using the benefit provisions applicable to active members, vested terminated members, and retirees and beneficiaries as of the valuation date using the assumptions summarized elsewhere in this report.

**Normal Costs.** The actuarial present values for each year of service rendered before and after the valuation date are determined so that:

- (i) The annual normal costs for each individual active member, payable from the member's effective date of employment (or entry age) to projected date of retirement, are sufficient to accumulate the value of the member's benefit at the time of retirement; and
- (ii) Each annual normal cost is a constant percentage of the active member's year-by-year projected pensionable pay.

**Actuarial Accrued Liabilities.** The actuarial present value of future benefits minus the actuarial present value of normal costs rendered after the valuation date is the Actuarial Accrued Liabilities.

**Funding Value of Assets.** The accrued assets recognized as of the valuation date for the purpose of determining contribution requirements.

**Unfunded Actuarial Accrued Liabilities.** The Actuarial Accrued Liabilities minus the funding value of assets are the Unfunded Actuarial Accrued Liabilities.

**Amortization of Unfunded Actuarial Accrued Liabilities.** Unfunded Actuarial Accrued Liabilities were amortized by level (principal & interest combined) percent-of-payroll contributions over periods shown elsewhere in this report. Active member payroll was assumed to increase 4.0% a year for the purpose of determining the level percent contributions, unless the 10-year average annual payroll growth is lower than 4.0%.

**Actuarial Assumptions.** Assumptions are established by the Board after consulting with the actuary. Non-economic assumptions are generally selected on the basis of the System's historical activity, modified for expected future differences. The reasonableness of the economic assumptions is based upon capital market expectations provided by various investment consultants and other sources such as the Social Security Trustees report. All actuarial assumptions are based on future expectations, not market measures.

			<b>\$ 9,240,720</b>	<b>TOTAL</b>

Level percent-of-payroll financing of unfunded actuarial accrued liabilities treats each generation of taxpayers equally during the financing period. The alternative, level-dollar financing, produces declining percent-of-payroll contributions and places a greater relative burden on current taxpayers.

The annual rate of increase in member payroll used to compute the level percent-of-payroll contribution is the same rate of payroll growth used to compute actuarial liabilities and costs. It reflects across-the-board salary increases not group size increases.

If future payroll growth is less than the assumed rate due to smaller than projected salary increases, the percent-of-payroll contribution rate for unfunded actuarial accrued liabilities will tend to decline.

If future payroll growth is less than the assumed rate due to decreases in the number of members, the percent-of-payroll contribution rate for unfunded actuarial accrued liabilities will tend to increase but dollar contributions will be less than indicated in the preceding schedule.

				<b>\$</b>	<b>3,582,445</b>	<b>TOTAL</b>

Level percent-of-payroll financing of unfunded actuarial accrued liabilities treats each generation of taxpayers equally during the financing period. The alternative, level-dollar financing, produces declining percent-of-payroll contributions and places a greater relative burden on current taxpayers.

The annual rate of increase in member payroll used to compute the level percent-of-payroll contribution is the same rate of payroll growth used to compute actuarial liabilities and costs. It reflects across-the-board salary increases not group size increases.

If future payroll growth is less than the assumed rate due to smaller than projected salary increases, the percent-of-payroll contribution rate for unfunded actuarial accrued liabilities will tend to decline.

If future payroll growth is less than the assumed rate due to decreases in the number of members, the percent-of-payroll contribution rate for unfunded actuarial accrued liabilities will tend to increase but dollar contributions will be less than indicated in the preceding schedule.

## Actuarial Estimates Used for the Valuation

Funding objective contribution requirements and actuarial present values are calculated by applying estimates of future activities (actuarial estimates) to the benefit provisions and people information of the System.

The principal areas of risk which require estimates of future activities are:

- (i) Long-term rates of investment return to be generated by the assets of the System
- (ii) Patterns of pay increases to members
- (iii) Rates of mortality among members, retirants, and beneficiaries
- (iv) Rates of withdrawal of active members
- (v) Rates of disability among active members
- (vi) The age patterns of actual retirements

In a valuation, the monetary effect of each activity is calculated for as long as a present covered person survives - - - a period of time which can be as long as a century.

---

Actual activities of the System will not coincide exactly with estimated activities, due to the nature of the activities. Each valuation provides a complete recalculation of estimated future activities and takes into account the effect of differences between estimated and actual activities to date. The result is a continual series of adjustments (usually small) to the computed contribution rate.

From time-to-time one or more of the estimates are modified to reflect experience trends (but not random or temporary year-to-year fluctuations).

In accordance with Chapter 112, Florida Statutes, 112.661(9), the Retirement Board adopts the assumed rate of return assumption used for actuarial valuation purposes. The actuarial assumptions are set by the Board. The rationale for certain actuarial assumptions is described in the October 1, 1995 through September 30, 2000 experience study report. All actuarial assumptions are estimates of future experience.

Actuarial estimates regarding the net investment return, inflation, real investment return, and salary increase rates are used, in combination with the other assumptions, to (i) determine the present value of amounts expected to be paid in the future and (ii) establish rates of contribution which are expected to remain relatively level as a percent of total valuation payroll.

**Net Rate of Investment Return.** 7.25% per annum, compounded annually, net of investment expenses.

**Inflation.** 2.75% per annum, compounded annually. This is the rate at which growth in the supply of money and credit is estimated to exceed growth in the supply of goods and services. It may be thought of as the rate of depreciation of the purchasing power of the dollar. There are a number of indices for measuring the inflation rate. The recent inflation rate, as measured by the Consumer Price Index, has been:

	Year Ended September 30					Average for Period
	2021	2020	2019	2018	2017	
Actual	5.40%	1.40%	1.70%	2.30%	2.20%	2.59%
Assumed	2.75%	2.75%	2.75%	2.75%	2.75%	2.75%

**Real Investment Return.** 4.50% per annum, compounded annually. This is the rate of return assumed to be produced by investing a pool of assets in an inflation-free environment. Recent real investment return for the Retirement and Benefit System has been:

	Year Ended September 30					Average for Period
	2021	2020	2019	2018	2017	
Total Rate of Return	10.15%	8.18%	8.08%	8.07%	8.03%	8.50%
Less Inflation Rate	5.40%	1.40%	1.70%	2.30%	2.20%	2.59%
Actual Real Rate of Return	4.75%	6.78%	6.38%	5.77%	5.80%	5.91%
Assumed Real Rate of Return	5.00%	5.00%	5.00%	5.00%	5.00%	5.00%
Assumed Net Rate of Return	7.50%	7.75%	7.75%	7.75%	7.75%	7.70%

The total investment return rate was computed using the approximate formula  $i = I$  divided by  $1/2 (A + B - I)$ , where  $I$  is actual realized investment income plus market value adjustments,  $A$  is the beginning of year asset value, and  $B$  is the end of year asset value.

The preceding investment return rates reflect the particular characteristics of this Retirement and Benefit System and should not be used to measure an investment advisor's performance or for comparison with other retirement systems. Such use will usually mislead.

**Salary Increases.** Employee salaries are estimated to increase between the date of hire and date of retirement. Salary increases occur in recognition of (i) individual merit and seniority, (ii) inflation related depreciation of the purchasing power of salaries, and (iii) competition from other employers for personnel.

A schedule of estimated rates of increases in individual salaries for sample ages follows:

<b>Annual Rates of Salary Increases for Sample Ages</b>						
<b>Age</b>	<b>General and Utilities Authority</b>			<b>Police Officers</b>		
	<b>Merit &amp; Seniority</b>	<b>Wage Inflation</b>	<b>Total</b>	<b>Merit &amp; Seniority</b>	<b>Wage Inflation</b>	<b>Total</b>
20	2.5 %	4.0 %	6.5 %	4.0 %	4.0 %	8.0 %
30	1.7 %	4.0 %	5.7 %	2.8 %	4.0 %	6.8 %
40	1.1 %	4.0 %	5.1 %	2.2 %	4.0 %	6.2 %
50	0.6 %	4.0 %	4.6 %	1.2 %	4.0 %	5.2 %
55	0.5 %	4.0 %	4.5 %	0.7 %	4.0 %	4.7 %
60	0.5 %	4.0 %	4.5 %	0.2 %	4.0 %	4.2 %

The merit and seniority rates for General and Utilities Authority were first used in the September 30, 2016 valuation.

The merit and seniority rates for Police Officers were first used in the September 30, 2001 valuation.

It is estimated that the group size will remain constant and that total payroll for the group will increase at the rate of the general increase in wage levels due to inflation, which in this case is 4.0%.

A schedule of recent salary change experience follows:

	% Change in Salaries					
	Year Ended September 30					Average
	2021	2020	2019	2018	2017	5-Year
Rate of Change in Salaries						
- Total	5.0 %	4.7 %	9.2 %	2.9 %	5.7 %	5.5 %
- General	4.9	5.1	7.4	3.9	6.1	5.5
- U.A.	4.2	4.6	7.3	3.7	4.6	4.9
- Police	6.4	4.0	15.2	0.2	7.2	6.5
Expected - Total						
- Total	5.1	5.1	5.1	5.2	5.0	5.1 %
- General	4.7	4.7	4.7	4.7	4.7	4.7
- U.A.	4.8	4.8	4.8	4.8	4.8	4.8
- Police	6.4	6.3	6.3	6.3	6.3	6.3

	% Change in Total Payroll						
	Year Ended September 30					Average*	
	2021	2020	2019	2018	2017	5-Year	10-Year
- Total	(0.8) %	2.4 %	8.7 %	2.5 %	3.9 %	1.7 %	3.0 %
- General	2.7	7.2	8.3	(0.6)	1.4	1.4	2.9
- U.A.	(2.3)	1.3	11.0	6.8	1.4	1.6	2.7
- Police	(2.7)	(1.7)	4.5	(1.6)	12.5	2.1	4.0

\* 5-year and 10-year averages include DROP payroll.

In order to achieve the funding objective of a contribution rate which remains level as a percent-of-payroll, the total rate of investment return must exceed the rate of average increase in salaries by an amount equal to the estimated real investment return rate.

**Mortality Tables.** The mortality tables used to measure retired life mortality were the Florida Retirement System (FRS) Mortality Tables, as described below:

**General & Utilities Authority**

- Male non-disabled pre-retirement mortality: fully generational mortality. PUB-2010 Headcount Weighted General Below Median Employee Male Table, set back 1 year, projected with scale MP-2018.
- Female non-disabled pre-retirement mortality: fully generational mortality. PUB-2010 Headcount Weighted General Below Median Employee Female Table, projected with scale MP-2018.
- Male non-disabled post-retirement mortality: fully generational mortality. PUB-2010 Headcount Weighted General Below Median Healthy Retiree Male Table, set back 1 year, projected with scale MP-2018.
- Female non-disabled post-retirement mortality: fully generational mortality. PUB-2010 Headcount Weighted General Below Median Healthy Retiree Female Table, projected with scale MP-2018.
- Male disabled mortality: PUB-2010 Headcount Weighted General Disabled Retiree Male Table, set forward 3 years.
- Female disabled mortality: PUB-2010 Headcount Weighted General Disabled Retiree Female Table, set forward 3 years.

**Police**

- Male non-disabled pre-retirement mortality: fully generational mortality. PUB-2010 Headcount Weighted Public Safety Below Median Employee Male Table, set forward 1 year, projected with scale MP-2018.
- Female non-disabled pre-retirement mortality: fully generational mortality. PUB-2010 Headcount Weighted Public Safety Employee Female Table, set forward 1 year, projected with scale MP-2018.
- Male non-disabled post-retirement mortality: fully generational mortality. PUB-2010 Headcount Weighted Public Safety Below Median Healthy Retiree Male Table, set forward 1 year, projected with scale MP-2018.
- Female non-disabled post-retirement mortality: fully generational mortality. PUB-2010 Headcount Weighted Public Safety Healthy Retiree Female Table, set forward 1 year, projected with scale MP-2018.
- Male disabled mortality: PUB-2010 Headcount Weighted 80% General Disabled Retiree/20% Public Safety Disabled Retiree Male Table.
- Female disabled mortality: PUB-2010 Headcount Weighted 80% General Disabled Retiree/20% Public Safety Disabled Retiree Female Table.

**Single Life Retirement Values**

Sample Ages in 2021	Present Value of \$1 Monthly for Life				Future Life Expectancy (Years)			
	General & UA		Police		General & UA		Police	
	Males	Females	Males	Females	Males	Females	Males	Females
45	\$151.63	\$156.42	\$151.41	\$156.72	38.33	42.20	37.29	41.47
50	143.91	150.30	145.55	151.29	33.10	36.91	32.46	36.29
55	137.38	145.78	137.66	144.26	28.73	32.46	27.68	31.26
60	130.17	139.14	127.67	135.62	24.64	27.92	23.10	26.47
65	120.65	129.66	115.87	125.16	20.58	23.35	18.83	21.96
70	107.95	117.07	101.46	112.37	16.58	18.87	14.82	17.70
75	92.93	101.75	85.15	97.26	12.87	14.69	11.22	13.78
80	76.43	84.28	67.91	80.62	9.59	10.93	8.14	10.31

The margin for future mortality improvements is included in projection scales. 100% of deaths were assumed to be non-duty related.

**Rates of separation from active membership.** The rates do not apply to members eligible to retire and do not include separation on account of death or disability. This estimate measures the probabilities of members remaining in employment.

Samples Ages	Years of Service	Percent Separating Within Next Year	
		General and Utilities Authority	Police
ALL	0	22.00 %	15.00 %
	1	16.50	12.00
	2	12.00	10.00
	3	10.00	8.00
	4	8.00	6.00
20	5 & Over	8.00	6.00
25		8.00	6.00
30		8.00	6.00
35		8.00	6.00
40		8.00	6.00
45		5.00	3.50
50		2.25	1.00
55		2.25	1.00
60		2.25	1.00
65		2.25	1.00

The rates for all divisions were first used in the September 30, 2016 valuation.

**Rates of Disability.** These estimates represent the probabilities of active members becoming disabled.

Sample Ages	Percent Becoming Disabled Within Next Year	
	General and Utilities Authority	Police
20	0.04 %	0.07 %
25	0.04	0.09
30	0.04	0.10
35	0.05	0.14
40	0.10	0.21
45	0.17	0.32
50	0.36	0.52
55	0.59	0.92
60	0.90	1.53
65	1.00	1.65

The mortality table was set forward ten years for projecting disability costs. 100% of the disability retirements were assumed to be non-duty related for General and Utilities Authority members. 75% of the disability retirements were assumed to be non-duty for Police members.

**Rates of Retirement.** These rates are used to measure the probabilities of an eligible member retiring during the next year.

Service Years	Service Based		Age Based		
	General and Utilities Authority	Police	Retirement Ages	General and Utilities Authority	Police
25	40 %	75 %	55		35 %
26	40	75	56		30
27	40	75	57		30
28	40	75	58		30
29	40	75	59		30
30	40	100	60	10 %	30
31	40	100	61	5	30
32	40	100	62	12	30
33	40	100	63	6	30
34	40	100	64	14	40
35	100	100	65	65	100
			66	25	
			67	30	
			68	40	
			69	50	
			70	100	

These rates were first used for the September 30, 1995 valuation with the exception of the Police service based rates, which were first used for the September 30, 2000 valuation, Police age based rates which were first used for the September 30, 2001 valuation, and Utilities Authority service based rates which were first used for the September 30, 2007 valuation.

## Miscellaneous and Technical Assumptions

**Marriage Assumption.** It is estimated that 80% of active members who meet the age and service requirements for pre-retirement survivor benefits are married. Female spouses are estimated to be 3 years younger than the male participant. Male spouses are estimated to be 3 years older than the female participant.

**Pay Increase Timing.** Middle of (Fiscal) year.

**Decrement Timing.** Retirement decrements are assumed to occur at the beginning of the year. Decrements of all other types are assumed to occur at the end of the year.

**Eligibility Testing.** Eligibility for benefits is determined based upon the age nearest birthday and service nearest whole year on the date the decrement is assumed to occur.

**Benefit Service.** The nearest whole year of service on the date the decrement is assumed to occur is used to determine the amount of benefit payable.

**Decrement Relativity.** Decrement rates are used without adjustment for multiple decrement table effects.

**Decrement Operation.** Disability and mortality decrements do not operate during the first 5 years of service. Disability and withdrawal do not operate during retirement eligibility.

**Normal Form of Benefit.** The assumed normal form of benefit is the straight life form. Optional benefit forms are available on an actuarial equivalent basis.

**Incidence of Contributions.** Contributions are assumed to be received continuously throughout the year based upon the computed percent-of-payroll shown in this report, and the actual payroll payable at the time contributions are made. New entrant normal cost contributions are applied to the funding of new entrant benefits.

**Vested members** who terminate with a benefit worth less than 100% of their own accumulated contributions were presumed to elect a refund of accumulated contributions and forfeit the vested benefit.

**Lump sum payments** included in the calculation of the average pay upon which benefits are computed were estimated to increase benefits by the following percents.

General members	3.5 %
Utilities Authority members	3.0
Police members	4.0

**Administrative Expenses.** Administrative expenses for the next year are assumed to be equal to the previous year's amount.

**Investment Expenses.** Investment expenses are paid out of investment income.

**Active Member Group Size.** The valuation was based on a constant active member group size.

**Valuation Pay.** Active members whose current pay is at least 10% less than their pay in the prior valuation were assumed to have their prior year pay for this valuation.

## Definitions of Technical Terms

**Accrued Service.** Service credited under the system which was rendered before the date of the actuarial valuation.

**Actuarial Accrued Liability.** The difference between the actuarial present value of future benefit payments and the actuarial present value of future normal costs. Also referred to as "accrued liability" or "past service liability."

**Actuarial Cost Method.** A mathematical budgeting procedure for allocating the dollar amount of the "actuarial present value of future benefit payments" between future normal costs and actuarial accrued liability. Sometimes referred to as the "actuarial valuation cost method."

**Actuarial Equivalent.** A single amount or series of amounts of equal actuarial present value to another single amount or series of amounts, computed on the basis of appropriate actuarial activities.

**Actuarial Present Value.** The amount of funds currently required to provide a payment or series of payments in the future. It is determined by discounting future payments at predetermined rates of interest, and by probabilities of payment. Also referred to as "present value."

**Amortization.** Paying off an interest-discounted amount with periodic payments of interest and principal -- as opposed to paying off with lump sum payment.

**Experience Estimates (Assumptions).** Estimates of expected future experience with respect to rates of mortality, disability, turnover, retirement, rate or rates of investment income and salary increases. Decrement estimates (rates of mortality, disability, turnover and retirement) are generally based on past experience, often modified for projected changes in conditions. Economic estimates (salary increases and investment income) consist of the underlying rates in an inflation-free environment plus a provision for a long-term average rate of inflation.

**Experience Gain (Loss).** The difference between actual actuarial costs and estimated actuarial costs -- during the period between two valuation dates.

**Funding Value of Assets.** The actuarial value of assets used to determine contribution amounts.

**Normal Cost.** The actuarial cost allocated to the current year by the actuarial cost method. Sometimes referred to as "current service cost."

**Unfunded Actuarial Accrued Liability.** The difference between the actuarial accrued liability and the actuarial value of system assets. Sometimes referred to as "unfunded past service liability," "unfunded accrued liability" or "unfunded supplemental present value."

Most retirement systems have an unfunded actuarial accrued liability. They arise each time new benefits are added and each time an experience loss is realized.

Unfunded actuarial accrued liability does not represent a debt that is payable today. What is important is the ability to control the amount of unfunded actuarial accrued liability and the trend in its amount (after due allowance for devaluation of the dollar).
